5.外部播放器API

注意:一个页面只能引用一个播放器,生成新的播放器,应先将原先的播放器容器销毁

5.1 播放器引用方式

通过嵌入html页面的方式渲染播放器

参数

参数	必选	类型	说明
host	是	string	微录播域名
swlid	是	string	微课swlid
uid	是	int	自主平台用户id
access_token	是	string	用户鉴权码access_token
type	是	int	用户类型,默认1为学生,2为老师
callback	否	boolean	是否需要主动发送播放进度
callbackUrl	否	string	主动发送的地址(当callback为true,此参数必须)
playProgress	否	int	设置播放进度(数值范围:1-100),设置此参,播放进度将会从此开始播放

拼写规则

1.生成设置参数

```
1. var obj ={
2. 'host': 'http://v.sewise.com',
3. 'swlid': '4593843e-05c1-460e-af30-831920a930ed',
4. 'uname': 12,
5. 'callback': true,
6. 'callbackUrl': 'http://v.sewise.com/addplay?userid=12', //自主平台路径, 此处userid是为不同用户保存不同进度
7. 'playProgress': 50
8. }
9. var playerdata = encodeURI(JSON.stringify(obj));//将参数转成json字符串, 再进行encodeURI转码var playerhtml = '<script id="sewiseswlplayer"
src="'+obj.host+'/widgets/libs/sewiseswlplayer.js?data='+playerdata+'" charset="utf-8"></script>';//播放地址
```

2.代码生成结果示例

```
1. <script id="sewiseswlplayer" src="http://v.sewise.com/widgets/libs/sewiseswlplayer.js?data=%7
B%22host%22:%22http://v.sewise.com%22,%22swlid%22:%224593843e-05c1-460e-af30-
831920a930ed%22,%22uname%22:12,%22callback%22:true,%22callbackUrl%22:%22http://v.sewise.com/addpl
ay?userid=12%22,%22playProgress%22:50%7D"charset="utf-8"></script>
```

3.将代码放入html页面,即可生成sewise播放器

callbackUrl要求

播放器主动传递的参数

请求方式:post				
参数	类型	说明		
precent	int	百分比(数值范围:1-100)		
total_time	int	视频总时长(s)		
playTime	int	当前播放时间(s)		

5.2 播放器控制接口

支持的接口

- pause 暂停
- play 播放
- stop 停止
- playTime 获取当前视频播放到的位置(秒)

接口使用方式

```
播放器引用成功后,将会生成一个全局的函数变量:window.getSWLPlayer
```

示例

```
    //以鼠标移出播放器,播放自动暂停为例
    window.getSWLPlayer(function (sw) {
        //sw为播放器对象
        $(sw.el).on('mouseleave',function(){//表示离开播放器组件
        sw.pause();//调用播放器暂停方法
        })
        })
```
